Cimanggu, kec.Cikembar, Kabupaten Sukabumi, Jawa Barat 43157

Computer Engineering graduate with a strong interest in software development, machine learning, and cloud technology. Experienced in Python, web application and API development, as well as applying machine learning concepts to software solutions. Possesses strong analytical and problem solving skills, with the ability to learn quickly and work effectively both independently and as part of a team. Seeking opportunities in software engineering, machine learning, or cloud computing to contribute technical skills and continue developing professionally.

Work Experiences

Urban Visual Media - **Bandung** Sep 2025 - Dec 2025

Intership

Urban Visual Media is a company specializing in LED displays, videotrons, and digital signage, providing installation, configuration, content management, and maintenance of digital display systems.

- Assisted with the installation, configuration, and troubleshooting of LED Display and Videotron systems.
- Developed a real time gender and age detection system using Python, OpenCV, and deep learning models.
- Configured LED displays using Colorlight controllers and LEDVision, including pixel mapping, resolution, brightness, and display settings.
- Assisted field technicians with hardware installation, cabling, power supply checks, and display synchronization.

Education Level

Universitas Kebangsaan Republik Indonesia - **Bandung** Jul 2022 - Sep 2026

Bachelor's Degree Informatics Engineering, 3.82/4.00

- Graduated with a GPA of 3.82/4.00 and completed various projects in software development, web applications, APIs, and machine learning.

Organisational Experience

Robotic UKRI - **Bandung** Sep 2024 - Present

Co-Founder

A university student organization focused on robotics, programming, and technology development through collaborative projects, training, and technical activities.

- Developed and organized learning materials for robotics and programming to support member training and skill development.

Experience

- **Kayuku**: Developed a web-based application for wood production management, integrating Machine Learning using Random Forest to predict production output based on log dimensions and wood characteristics. The system also includes production data management, wood volume calculation, financial tracking, and demand forecasting to support more efficient and data-driven business operations.
- **Smart Ads AI-Based Audience Detection & Automated Advertising**: Developed an AI powered Smart Ads system using Python and OpenCV to detect faces and estimate audience gender and age in real time. Integrated the detection results with an automated advertising player to select and display relevant advertisements on LED displays based on audience demographics.
